DETAILED ACTION

Response to Amendment

1. Claims 8-14 are currently pending. The applicant cancelled claims 1-7 by preliminary amendment.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 8-14 are rejected under 35 U.S.C. 102(b) as being anticipated by International Publication Number WO 01/26337 by Gelvin et al.
4. As to claim 8, Gelvin teaches a device for connecting subnets in a vehicle (page 12, lines 13-22 and page 14, lines 12-16), comprising: a gateway unit configured to connect at least two subsystems (See Figure 3), wherein the gateway unit is made of at least one modular software gateway (page 14, lines 17-23), which routes messages between precisely two subnets (page 13, lines 27-30 and Figure 5, the IP Router 502 can route messages between precisely subnetworks 504 and 506, 506 and 508, or 504 and 508).
5. As to claim 9, Gelvin teaches the device as recited in claim 8, wherein at least three subnets are connected to the gateway unit (Figure 5), the gateway unit including a plurality of modular software gateways, each of the modular software gateways routing messages between

precisely two subsystems (IP Router 502 has IEEE 1394, Ethernet, and IDB-C drivers illustrated as link interfaces in Figure 7).

6. As to claim 10, Gelvin teaches the device as recited in claim 8, further comprising: bus-specific receiving objects configured to relay incoming messages to selected software gateways, the bus-specific receiving objects being provided for each subnet (IP Router 502 has IEEE 1394, Ethernet, and IDB-C drivers).

7. As to claim 11, Gevlin teaches the device as recited in claim 10, wherein the receiving objects include routing tables in which a treatment of incoming messages is configured (Routing tables are inherent to Router 502).

8. As to claim 12, Gelvin teaches the device as recited in claim 8, further comprising: bus-specific transmitting objects configured to monitor access to a particular bus, for each subnet (IP Router 502 has IEEE 1394, Ethernet, and IDB-C drivers. Page 18, lines 11-20 discusses how the link interfaces manage access to the physical layer).

9. As to claim 13, Gelvin teaches the device as recited in claim 8, wherein the modular software gateway is configured to buffer incoming messages and perform protocol-specific adaptations (page 18, lines 11-20 and Figure 7).

10. As to claim 14, Gelvin teaches a device for connecting subnets in a vehicle comprising: a gateway unit configured to connect at least two subsystems (See Figure 3), the gateway unit being integrated in a control unit having an application system and being provided in one layer of a communication system of the vehicle (page 12, lines 13-22 and page 14, lines 12-16), the gateway unit including at least one modular logical gateway (IP Router 502 has IEEE 1394,

Art Unit: 2142

Ethernet, and IDB-C drivers illustrated as link interfaces in Figure 7), the logical gateway connecting exactly two subsystems (Figure 3).
